└── INDEX.md                        ← This file
```

🚀 Getting Started

New to the API? Start here:

1. **QUICK_START.md** - 5-minute setup
   - Import collection
   - Login & get token
   - Test basic endpoints
   - Common mistakes
2. **README.md** - Complete reference
   - Detailed workflows
   - All endpoints
   - Response formats
   - Troubleshooting
3. **STRIPE_TESTING_GUIDE.md** - Payment testing
   - Complete local payment flow
   - Stripe CLI setup
   - Test card numbers
   - Coupon testing

4. **ORDERS_COUPONS_ENDPOINTS.md** - Quick reference
    - All Orders endpoints
    - All Coupons endpoints
    - New environment variables
5. **API_SPECIFICATION.md** - Technical details
    - Data models
    - Business rules
    - Error handling
    - Database structure

📦 What's Included

Collection: `ECommerce_API.json`

Sections:

- 🔐 **Authentication** - Register, Login, Refresh Token, Forgot Password, Verify OTP, Reset Password
- 📦 **Products** - CRUD operations, filtering, **Search & Recommendations**
- 🔍 **Search** - Products, Brands, Categories with autocomplete recommendations
- 🖼️ **Product Images** - Upload, update, delete (Cloudinary CDN)
- 🎨 **Product Variants** - Size/Color management
- 🛒 **Cart** - Shopping cart operations
- ❤️ **WishList** - Favorites, add/remove, check favorites
- 📂 **Categories & Brands** - Master data with search
- ⭐ **Reviews** - Product ratings and comments
- 📋 **Orders** - Create, track, payment intents, cancel orders
- 🎟️ **Coupons** - User coupons, admin assignment, bulk operations
- 🔔 **Webhooks** - Stripe payment webhooks
- 👨‍💼 **Admin Management** - Cart controls, order status updates

Total Endpoints: 80+ (including Orders, Payments, Coupons management)

Environment: `Development.json`

Key Variables:

- `baseUrl` - API base (localhost:7286/api)
- `authToken` - Auto-set after login
- `userId` - Auto-set after login
- `orderId` - Order ID for testing
- `addressId` - Address ID for orders
- `couponId` - Coupon ID for admin operations
- `couponCode` - Coupon code to test
- Test IDs for quick testing

Globals: `Global_Variables.json`

Common Values:

- Test credentials
- Pagination defaults
- Test product/variant IDs

🔄 Popular Workflows

1️⃣ Create Product with Variants (Admin)

```
1. Create product → POST /api/products/create
2. Upload images → POST /api/products/{id}/images (×2-3)
3. Add variants → POST /api/products/{id}/variants (×3)
4. Stock auto-calculated → GET /api/products/{id}
```

See: README.md - Product Management

2️⃣ Customer Shopping

```
1. Login → POST /api/auth/login
2. Browse → GET /api/products
3. Add to cart → POST /api/cart/items
4. View cart → GET /api/cart/summary
```

See: QUICK_START.md - Customer Flow

3️⃣ Admin Stock Management

```
1. Update variant stock → PUT /api/products/{id}/variants/{variantId}
2. Product stock auto-recalculated
3. View all carts → GET /api/admin/carts
```

See: README.md - Admin Endpoints

4️⃣ Manage WishList (Favorites)

```
1. Login → POST /api/auth/login
2. Browse products → GET /api/products (returns isFavorite status)
3. Add to wishlist → POST /api/products/{id}/wishlist
4. View my favorites → GET /api/wishlist
```

```
5. Remove from wishlist → DELETE /api/products/{id}/wishlist
6. Check if favorite → GET /api/products/{id}/wishlist/check
```

See: [README.md - WishList Management]

5 Product Search with Autocomplete

```
1. Get search suggestions → GET /api/products/search/recommendations?
term=shi&size=5
2. Full search → GET /api/products/search?term=shirt&page=1&pageSize=10
3. Same for brands → GET /api/brands/search & GET
/api/brands/search/recommendations
4. Same for categories → GET /api/categories/search & GET
/api/categories/search/recommendations
```

See: [README.md - Search & Recommendations]

6 Complete Order & Payment (Stripe)

```
1. Login → POST /api/auth/login
2. Create order → POST /api/orders
3. Create payment → POST /api/orders/{id}/payment
4. Confirm in Stripe Dashboard → Webhook fires → Order status: Paid
5. Verify order → GET /api/orders/{id}
```

See: [STRIPE_TESTING_GUIDE.md]

7 Admin Coupon Management

```
1. Create coupon → POST /api/coupons (admin)
2. Assign to user → POST /api/coupons/{id}/assign-user/{userId}
3. User views → GET /api/coupons/my-coupons
4. User applies → POST /api/orders (with couponCode)
```

See: [ORDERS_COUPONS_ENDPOINTS.md]

🔘 Key Business Rules

Two Types of Products

WITH Variants (e.g., T-Shirt with sizes)

```
```

```
HasVariants = true
→ Must select variant when adding to cart
→ Stock managed at variant level
→ Product stock = SUM of variant stocks (auto-calculated)
```

WITHOUT Variants (e.g., Poster)

```
HasVariants = false
→ Add directly to cart
→ Stock managed at product level
```

See: API Specification - Business Rules

📊 API Response Format

All endpoints follow this structure:

Success (200 OK)

```
{
  "status": true,
  "message": "Operation successful",
  "data": { /* response data */ }
}
```

Error (4xx/5xx)

```
{
  "status": false,
  "message": "Error description",
  "data": null
}
```

See: README.md - Response Format

🔗 Quick Links by Role

For Frontend Developers

- Product browsing: README.md - Product Management
- **Search & Autocomplete**: README.md - Search & Recommendations

- Cart operations: README.md - Shopping Cart Logic
- **Orders & Payments**: STRIPE_TESTING_GUIDE.md
- Common workflows: QUICK_START.md

For Backend Developers

- API architecture: API_SPECIFICATION.md
- Data models: API_SPECIFICATION.md - Data Model
- **Payment Integration**: STRIPE_TESTING_GUIDE.md
- Error handling: API_SPECIFICATION.md - Error Handling

For QA/Testers

- Test workflows: README.md - Common Workflows
- **Payment Testing**: STRIPE_TESTING_GUIDE.md
- **Coupon Testing**: ORDERS_COUPONS_ENDPOINTS.md
- Error scenarios: README.md - Troubleshooting
- All endpoints: Collection ECommerce_API.json

For Admins

- Admin endpoints: README.md - Admin Endpoints
- **Coupon Management**: ORDERS_COUPONS_ENDPOINTS.md
- Stock management: API_SPECIFICATION.md - Stock Management

⚡ Common Tasks

Task	Resource	Time
Get started quickly	QUICK_START.md	5 min
Test payment flow	STRIPE_TESTING_GUIDE.md	10 min
Manage coupons	ORDERS_COUPONS_ENDPOINTS.md	5 min
Understand stock system	API_SPECIFICATION.md	10 min
Implement search/autocomplete	README.md - Search & Recommendations	5 min
Find specific endpoint	README.md	2 min
Test cart flow	Collection → Cart section	5 min
Debug error	README.md - Troubleshooting	3 min
Setup environment	README.md - Getting Started	2 min

📞 Support Resources

Documentation Files

- **QUICK_START.md** - Fast, practical guide
- **README.md** - Comprehensive reference
- **API_SPECIFICATION.md** - Technical details
- **This file** - Navigation & overview

Collection Features

- 40+ pre-built requests
- Auto-token capture from login
- Environment variables for easy switching
- Test scripts for validation

Getting Help

1. Check Troubleshooting section
2. Review relevant workflow in Common Workflows
3. Check API specification for business rules
4. Look for similar endpoint in collection

📋 File Checklist

Before using the API, ensure you have:

- ☑ `ECommerce_API.json` - Main collection
- ☑ `Development.json` - Development environment
- ☑ `Global_Variables.json` - Test constants
- ☑ `README.md` - Full documentation
- ☑ `QUICK_START.md` - Setup guide
- ☑ `STRIPE_TESTING_GUIDE.md` - Payment testing workflow
- ☑ `ORDERS_COUPONS_ENDPOINTS.md` - Orders & Coupons reference
- ☑ `API_SPECIFICATION.md` - Technical reference

🔄 Environment Setup

Development Environment

```
{
  "baseUrl": "http://localhost:7286/api",
  "adminBaseUrl": "http://localhost:7286/api/admin",
  "authToken": "Bearer ...",      // Auto-filled
  "userId": "...",                // Auto-filled
  "page": "1",
  "pageSize": "10"
}
```

Variables Auto-Set After Login

- `authToken` ← Used for all authenticated requests
- `userId` ← Your user ID

🎯 Next Steps

1. **Import collection** → Collections/ECommerce_API.json
2. **Set environment** → Environments/Development.json
3. **Read QUICK_START** → QUICK_START.md
4. **Login** → POST /api/auth/login
5. **Test endpoints** → Start with Products, then Cart

📝 Last Updated

Date: March 4, 2026
API Version: 1.0.0
Framework: ASP.NET Core 10.0

📚 Document Hierarchy

```
BEGIN HERE
    ↓
QUICK_START.md (5 min overview)
    ↓
README.md (move to specific section)
    ├→ Product Management?
    ├→ Shopping Cart?
    ├→ Admin Endpoints?
    └→ Troubleshooting?
    ↓
